FLOOR SANDING PROFESSIONAL MARKET

CATALOG #350

ABRASIVE REFINISHING PRODUCTS

THE **MUSCLE** BEHIND THE MACHINE®

TM

PRODUCT TIERING

NORTON
REDHEAT
Exclusive Technology.
Unrivaled Performance.

BEST

Represents products unmatched in the industry that provide the lowest total sanding cost for the most demanding sanding applications. A super sharp ceramic grain cuts fast and lasts up to 3X longer, saving time and labor when sanding sports floors, aluminum oxide finishes, and the hardest exotic woods while leaving the finest scratch pattern of any product.

NORTON
BLUEfire
The True Blue.
Reinvented.

BETTER

Represents superior performing products for the user who requires a high level of productivity and low total abrasive cost while providing outstanding performance. Next generation zirconia grain technology provides an even faster cut and longer life, making it the professional's choice for all residential floor sanding applications. The anti-static treatment provides a better finish and cleaner work environment.

NORTON
DURITE
Quality Without
Compromise.

GOOD

Represents a value for the user who wants Norton quality with consistent performance and competitive price for general applications. The traditional silicon carbide grain provides low initial price that best suits the removal of old wax and varnish coatings as well as sanding softwoods like pine and fir that tend to load the paper more readily.

FLOOR FINISHING SEQUENCE

FLOOR TYPE	APPLICATION				
	ROUGH SAND	INTERMEDIATE SAND	FINAL SAND (OPTIONAL)	HARD PLATING	SCREENING (OPTIONAL)
NEW WOOD / INSTALL	Levelling cupped or uneven floors and removing old coatings, if applicable. 50 or 60 Grit	Smoothing out deep scratches and surface irregularities if rough sand was done with a grit coarser than 50 grit. Not Necessary	Final prepping of bare wood to ensure smooth, consistent surface. 80 or 100 Grit	Designed to completely flatten the floor especially when mixed species are involved. 80 or 100 Grit	Blending the field and perimeter of the floor to allow even stain and finish penetration. 100 or 120 Grit
OLD FLOOR REFINISH (GOOD CONDITION)	36 or 40 Grit	50 or 60 Grit	80 or 100 Grit	80 or 100 Grit	100 or 120 Grit
OLD FLOOR REFINISH (BAD CONDITION)	16 or 24 Grit	40, 50, or 60 Grit	80 or 100 Grit	80 or 100 Grit	100 or 120 Grit
ALUMINUM-OXIDE PRE-FINISHED FLOOR	24, 36, or 40 Grit	50 or 60 Grit	80 or 100 Grit	80 or 100 Grit	100 or 120 Grit

NOTE: THIS IS STARTING RECOMMENDATION ONLY AND CAN VARY BY JOB, CUSTOMER REQUIREMENTS AND CONTRACTOR PREFERENCE.

RECOMMENDED SANDING SEQUENCE

Diagram 1 shows what happens when a **proper sanding sequence** is followed, not skipping more than one grit between each cut.

- The 36 grit flattens the floor and leaves deep scratches.
- The 50 grit refines those deep scratches, removing the “peaks” left by the 36 grit.
- The 80 grit then refines the scratch even further leaving a surface that is appropriate for staining or finishing.

Diagram 2 shows a common practice, **skipping more than one grit** between each cut. Contractors may think this saves time and money.

- The 36 grit flattens the floor and leaves deep scratches.
 - The 80 grit removes the peaks from the scratches left by the 36 grit, but cannot remove the deep “valleys”.
 - These deep scratches cannot be removed by screening. They will also be highlighted by staining and finishing.
- The deep scratches will also require more finish to be used, since more finish will be needed to fill in the deep “valleys” left from the 36 grit. This will ultimately lead to a finish that fails prematurely.

GENERAL GRIT GUIDE

GRADE	GRIT	NUMBER	BASIC APPLICATION
EXTRA FINE	150	4/0	Very fine finish sanding.
	120	3/0	
FINE	100	2/0	Finish sanding. Prep floor first coat of stain/sealer.
	80	0	
MEDIUM	60	1/2	Intermediate sanding. Removing scratches left by primary step.
	50	1	
COARSE	1-1/2	1-1/2	Rough Sanding. Smoothing or levelling floors.
	2	2	
	2-1/2	2-1/2	
EXTRA COARSE	3	3	Heavy sanding. Removing old coatings.
	3-1/2	3-1/2	
	4	4	
	4-1/2	4-1/2

true blue REINVENTED.

- High level of productivity yields lowest total cost abrasive
- Outstanding removal with consistent finish and less airborne wood dust
- Proven performance of the original blue belt now infused with the newest grain technology for even greater results

Scan the QR code with your smart phone and watch our product video

Mounted to a belt machine for continuous sanding

Used to do the main portion of the floor

Ideal for heavy stock removal

Leveling floors and achieving a very smooth finish

Popular with professional contractors for use on larger jobs

BETTER

Norton BlueFire (R831 Cloth)

Next generation of patented, premium, self-sharpening, 100% zirconia alumina abrasive for longer life, faster cut and outstanding durability. The anti-static technology increases dust collection efficiency for a cleaner working environment. The improved resin bond ensures grain retention under the most demanding applications. And, the consistent scratch pattern means the finest finish of the floor.

BELTS

Norton Red Heat (R955)

100% patented SG (Seeded Gel) ceramic alumina abrasive for longest life, fastest cut and more consistent finish. Tough Y-weight cotton cloth backing is extremely flexible and shock absorbent for extreme conditions. No risk of color transfer with assured color consistency. Ideal for larger jobs and harder A/O finishes.

11-7/8" x 21-11/16"	Lagler Elf

tip

When sanding pre-finished floors, common sense would say to start by using the coarsest grit available to sand off a very tough coating. In reality, the opposite is true. By starting with a coarse grit, you will get decreased product life and performance.

The proper sanding technique for pre-finished floors involves sanding the floor first with a finer grit, usually 80 grit. Sand the finish lightly with 80 grit, just to scratch the surface. Then come back with a coarser grit, usually 40 or 50 grit is coarse enough to remove the finish. Using this technique will greatly increase product life and cut rate. This technique works for the edger as well as the belt sander.

The ideal product to use is Norton Red Heat. It's ceramic grain and micro-fracturing properties give it a longer life and faster cut rate on the hardest surfaces.

FastTRACK[™]
SERVICE

FastTrack is a special order service for sanding belts. Items are identified as FastTrack in the catalog by *FT* following the part number. You must order directly from customer service.

5-day Manufacturing Lead Time

Order Requirements:

- Minimum order qty: 1 case per order
- Maximum order qty: 3 cases per order

NOTE: Standard manufacturing leeway of 10% ±.

ROLLS

Used to do the main portion of the floor

A pre-cut roll cover is cut to spec and mechanically applied to a rubber drum

Rolls are preferred for their ease of storing and carrying over pre-cut sheets

Rolls are generally used for larger jobs

Commonly used in the rental trade due to its lower cost vs. belt sanders

BEST

Norton Red Heat

(R955 Cloth, H955 Paper)

100% patented ceramic alumina (SG) abrasive for longest life, fastest cut and more consistent finish. Ultra tough Y-weight backing is extremely flexible and shock absorbent for extreme conditions. No risk of color transfer with assured color consistency. Ideal for larger jobs and harder A/O finishes.

tip

To make edging easier, you can cut cross grain with the belt sander along wall joints and between kitchen islands. You need to use a fine grit, usually nothing coarser than 80 grit, and a low drum pressure. Make light cuts. This will remove most of the finish and help flatten the floor, without leaving deep scratches. This can dramatically reduce the time spent edging.

SHEETS / COVERS

Sheets pre-cut to meet manufacturers drum sander specs

Ideal for all phases of a small job

12 x 18 or 12 x 24 used on a square or rectangular-shaped sander that sands in a short, orbital pattern

- Easy to use, popular in the rental trade
- Can also be used as a polisher

BEST

GOOD

Orbital Sheets

Paper:

100% silicon carbide abrasive coated with abrasive on both sides for twice the life, quick switch, no PSA contamination, increased tear resistance. Strong E&F weight paper for durability.

Screen:

Inter-woven polyester knit backing with abrasive grain on both sides and open mesh for load resistance. Rinse and reuse for longer sanding life. Cuts more aggressively than paper or cloth.

Non-Woven Back-up Pads:

Used in conjunction with the PSA or double sided paper sheets. The orbital machine rests on top of the non-woven pad which acts as the driver for the abrasive, cutting softer leaving less of a scratch pattern. Choose white (non-abrasive) or red for a general purpose driver pad. Pad only, choose maroon for between coats abrasion and gray for light conditioning.

SHEET MACHINE GUIDE

SHEET SIZE	MACHINE
8" x 19-1/2"	Clarke 8" Model DU-8, DU8R & D48R
8" x 20-3/16"	SilverLine SL 8
12" x 18"	Square-Buff, Clarke, Deva, Silverline
12" x 24"	Flooring M101-24

tip

To mount, place a paper or screen sheet on the floor, then place the non-woven driver pad on top. Next, tilt the machine back on a 45 degree angle and then lower it squarely on top of the driver pad.

unleash THE HEAT.

- 100% patented SG ceramic grain
- Cuts more aggressively for fast coatings and adhesive removal when prepping subfloors
- Strong F-weight backing resists tearing

Used for hard plating

Aggressive cutting easily blends scratches from edger and drum sanders

For final sanding to prevent dish out of softer grain

Reduces dish out of springwood on strip and plank floors

Ideal for surface prep on wood and concrete to remove various residues

BEST

Red Heat (H955 Paper)

100% patented SG (Seeded Gel) ceramic alumina grain with heavy F-weight backing produces a much finer scratch pattern than typical silicon carbide discs. Ideal for the hardest wood species. Best choice for parquet and multi-species floors.

Additional Sizes Available as Non-Stock:

15" x 2, 16" x 2, 16" x 4, 17" x 2, 19" x 2 Better Paper and 15" x 2, 17" x 2, 20" x 2 Good Paper.

tip

Sanding old coatings can be labor-intensive and require a lot of material, especially if the coatings gum up the paper quickly. Heat and friction cause the old coatings to soften and then stick to the paper.

Norton Red Heat can be effective for removing these old coatings since the ceramic grain is super sharp and cuts cooler; so, it doesn't heat up the finish as much which tends to minimize loading.

662611 35741 8	12	10 / 10

tip

Double sided discs make hard plating simpler and easier by eliminating the need to mechanically fasten the disc to the bottom of the buffer. When using single sided large discs in hard plating, it is recommended to apply two discs at a time making sure the slots at the center hole of each disc are offset. This will help prevent the disc from prematurely tearing at the center hole.

Always use a screen driver pad with a double sided disc to prevent slippage, and get the flattest surface possible. You can sandwich a screen driver pad between two double sided discs to increase stiffness for an even flatter surface.

performance ON FIRE!

- Next generation Zirconia grain is razor sharp for faster cutting and longer life
- Strong F-weight backing resists tearing
- Leaves a fine scratch pattern for less visible sanding marks
- Anti-static technology resists loading and minimizes airborne dust

Used on hand held edger machines

To sand areas where the drum/belt sander does not reach

BETTER

BOLT-ON

Norton BlueFire (H831 Paper)

100% self-sharpening zirconia alumina abrasive for long life and outstanding durability. Strong F-weight backing for softer cut with an open coat design for excellent finish removal and resistance to loading.

tip

Used with a Maroon Conditioning Pad, screens can be an optional step in the edging sequence to provide a much finer finish than a paper disc.

universally DUST-FREE.

- Ceramic Alumina abrasive cuts faster and lasts 3 times longer than conventional products
- Leaves a very fine finish
- Universal vacuum hole design fits all 5" random orbital sanders
- Ideal for removing edger marks and sanding stair treads

These specialty discs used on multi-disc machines produce a finer finish and flatter floor than belt or drum machines

Orbital discs are used on hand-held machines for final sanding of edges and stair treads.

BETTER

HOOK & LOOP UNIVERSAL Ceramic Alumina (A975 Paper)

Superior dry sanding on all surfaces and coatings. P-graded ceramic alumina abrasive for 3 times longer total performance than conventional products. Unique fibre-reinforced paper backing for excellent flexibility and edge tear resistance. Universal vacuum hole (UVH) pattern fits all 5" random orbital sanders. Ideal for tight spots and stair treads.

076607 05489 0	P80	50 / 200
076607 05490 6	P60	50 / 200

FEATURES

- patented, ceramic alumina abrasive, P-graded (80-320)
- unique, fiber reinforced backing
- nonpigmented, water-based zinc stearate (anti-clog), open coat
- patented, universal vac hole pattern (5" only)
- hook & loop backing

BENEFITS

- lasts 3X longer than conventional aluminum oxide
- consistent finish
- superior cut rate
- edge tear resistant
- reduced loading
- no finish contamination
- fits 5 and 8 hole vac sanders
- quick and easy disc change
- allows repeated use until disc is worn

tip

The ceramic alumina hook and loop random orbital sanding discs offer the same tough and aggressive performance as our professional edger discs. The Universal Vacuum Hole (UVH) configuration allows the disc to be used on either the 5 vacuum hole or 8 vacuum hole sander.

GRIT GUIDE

GRADE (GRIT)	BASIC APPLICATION
EXTRA FINE (320)	For primer, sealer and between coats sanding
VERY FINE (220)	For very fine sanding of bare surfaces, primer and sealer sanding
FINE (180/150)	For finish sanding and cleaning of bare surfaces
MEDIUM (120/100)	For light removal and smoothing of bare surfaces
COARSE (80/60)	For moderate removal and levelling of surface imperfections
EX. COARSE (40)	For heavy removal, stripping and dimensioning

HOOK & LOOP

Norton Red Heat (H955 Paper)

100% patented SG (Seeded Gel) ceramic alumina abrasive for longest life, fastest cut and more consistent finish. Tough F-weight backing is extremely flexible and shock absorbent for extreme conditions. No risk of color transfer with assured color consistency. Ideal for larger jobs and harder A/O finishes.

from rough TO BUFF.

- 100% patented SG ceramic grain
- Extremely sharp and fast cutting
- 2-3 times the life of Silicon Carbide
- Produces a finer scratch pattern than Silicon Carbide minimizing swirl marks

Used for final sanding to blend sanding marks from edger and belt/drum sander.

Always use a screen driver pad to prevent screen slippage and to maximize performance

BEST

Norton Red Heat (Q955 Screen)

100% patented SG (Seeded Gel) ceramic alumina grain combined with long life provides a consistent cut and finish over the life of the screen, virtually eliminating the risk of burnishing the wood.

tip

Remember the buffer sands at the 3 o'clock position as you look down at the machine. Make sure you screen the unfinished wood with the screen cutting in the same direction as the grain.

SCREEN DISCS

BETTER

Durite (Q421 Screen)

100% Silicon Carbide grain bonded to an inter-woven polyester knit backing provides increased durability and life. Full resin bond provides excellent grain retention.

GOOD

Silicon Carbide (Screen)

Silicon Carbide abrasive in a cost effective design offers outstanding combination of performance and value.

GOOD

Screen Driver Pads

- Designed specifically for driving sanding screens and double sided discs
- Unique design prevents slippage which improves screen/disc life, cut, and finish
- Minimizes dish out of soft grain
- Can be used to buff on stain under a rotary buffer. The pad will hold and disperse stain evenly over the floor without slinging.

strip away OLD IDEAS.

- Norton SandDollar foam pads have a long life - approximately 1500 ft/pad
- These pads are extremely durable and tear resistant
- The design virtually eliminates the chance of cutting through the finish

Used for multiple levels of surface blending on hardwood floors

Used between coats of finish to give the surface a texture to adhere to

Used to remove dust particles and raised fibers between coats

BEST

Norton SandDollar Pads

The new way to sand between coats of finish. Unique pending design allows you to smooth and prep the surface of the floor to properly accept the next coat of finish without the risk of nasty swirl marks. Four grits – coarse, medium, fine and very fine – accommodate any application. The foam backing pad allows the product to abrade the surface without penetrating deep into the finish, resulting in a smoother overall floor.

tip

BETWEEN COATS

Don't over use your abrasive product when abrading between coats of finish. A worn out abrasive will still dull the surface, but it may not be putting the proper scratch into the finish to get a good mechanical bond for the next coat of finish. If the surface isn't abraded properly, you can wind up with finish peeling, flaking and chipping. It's a lot less expensive to use a few more abrasive products on the job than to go and re-sand a job because of finish failure.

BETTER

Non-Woven Conditioning Pads

These 1/4" thick pads are manufactured with the finest fibers, resins and abrasives. The unique design of this pad has a perforated 7" disc that is easily removed for use on an edger machine or simply as a hand pad. Use a maroon conditioning pad in conjunction with our aluminum oxide PSA sheet roll, applied in strips to the pad. This combination is especially effective on water-based finishes where screening takes away too much finish.

Aluminum Oxide PSA Sheet Rolls

Use a maroon conditioning pad in conjunction with our aluminum oxide PSA sheet roll, applied in strips to the pad. This combination is especially effective on water-based finishes where screening will take away too much finish.

tip

BUFFING ON STAIN

Buffing on stain is a technique that is gaining in popularity due to the time savings over traditional methods and the use of fewer materials, like rags and stain.

Our screen driver pads in tandem with our maroon conditioning pads create the perfect system for applying stain with a rotary buffer. The unique design of the screen driver pad allows it to hold and apply stain evenly on the floor without slinging.

The maroon pad (with 7" center removed) is placed on top of the screen driver pad. This center hole creates a "trough" where the stain is poured. This system is then driven with either a screen driver or maroon pad on the buffer drive plate. The screen driver and maroon pad remain on the floor during the process. The operator only needs to tip back the buffer to add more stain to the "trough." This makes for less mess during the process.

Typical Process

- Edges are cut in and wiped off by hand in appropriate size section of floor
- Stain is applied to main section of floor with buffer
- A clean screen driver pad is put on the buffer to buff off excess stain left on floor
- Move to next section of floor

Note:

- Not all stain can be applied with this method, check with stain manufacturer
- Do not work to large of an area to avoid lap marks
- Dispose of used pads properly, they are flammable

like lip gloss FOR YOUR FLOORS.

- Removes existing coatings to create "bite" for a new adhesive or sealer
- Robust design withstand hard applications on concrete
- The self-cleaning design minimizes loading

Used for driving screens and double sided discs

Used for the application and polishing of certain floor finishes

Surface Strip and Prep

These pads help eliminate the work involved with removal of existing glue and coatings to help create a "bite" for a new adhesive or sealer. The self-cleaning high quality 36 grit abrasive grain combination allows each pad to evenly clean and strip while producing a floor ready for new coating and/or adhesive. Use diluted stripping products to increase production.

PART NUMBER	SIZE	PKG / CASE
662611 98600 7	17"	5 / 5
662611 98602 1	20"	5 / 5

FEATURES

- Tough web construction
- Two abrasive grains
- Improved manufactured process

BENEFITS

- For better performance and extended pad life
- Provides removal of glue and coatings, or light grinding of paints, epoxy and mastic.
- Low cost compared to normal floor pad usage or diamond grinding
- Can be used wet or dry (wet reduces dust)

Red Buffer

Generally used where a high gloss finish is desired when dry or spray buffing. It can also be used for light cleaning applications.

Norton Blue Core 14 Day Tape

This premium grade, clean release tape comes in various widths for maximum versatility. Ideal for masking hardwood gym floors for game-line painting, as well as masking and hanging plastic sheeting for dust control.

Blue Core 14 Day Masking Tape meets or exceeds market standards. The medium adhesion backing means just enough tackiness to stick well to surfaces without the risk of pulling off paint from the wall or leaving adhesive behind.

PART NUMBER	SIZE	PKG / CASE
60 yard rolls		
076607 21952 7	3/4"	1 / 48

076607 21955 8	2"	1 / 24

Norton Contractor Grade Tape

A general purpose masking tape that offers both economy and versatility for a variety of materials and applications. Provides a clean release up to 3 days. Use for paint masking, hanging protective plastic, holding drop cloths in place and other general purpose masking needs where the tape will be removed when the project is complete.

Carpet Masking Tape

This carpet masking tape is made of semi-rigid mylar film with pressure sensitive adhesive and release liner on half. Easy to install and remove with better protection from paint seepage than standard tape that cannot fit under the trim. Each roll masks a 10ft. x 12ft. room.

PART NUMBER	SIZE	PKG / CASE
48 ft long roll		
076607 82094 5	2" x 48'	12 / 12

Micro-Fiber Cloths

Micro-fiber is a single fiber with a thickness less than a human hair that has been split 16 times and woven into various products. The surface area of the micro-fiber product is increased over 15 times, creating millions of spaces between the fibers which trap dirt, grime or liquids, making this product one of the most absorbent materials.

These "V" shape splits, while less than a micron in size, have edges that collect debris as opposed to pushing debris away. The particles are trapped in between the fibers and can be rinsed or machine washed to release heavily embedded particles. Micro-fiber products can be washed up to 300+ times without losing cleaning and trapping abilities. Micro-fiber products save you labor time and additional costs of multiple cleaning products and chemicals.

PART NUMBER	SIZE	PKG / CASE
Cleaning Cloth (Blue)		
076607 05300 8	16" x 16"	20 / 20

Cleaning Cloth (Blue) is used for general wet or dry applications. Works best when sprayed with a light water mist to deep clean.

PART NUMBER	SIZE	PKG / CASE
Dry Tack Cloth (Red)		
076607 04025 1	16" x 16"	20 / 20

Dry Tack Cloth (Red), the woven terry cloth, has a low profile to resist snagging and help pick up embedded debris. This cloth is used in dry tack applications.

PART NUMBER	SIZE	PKG / CASE
Polishing Cloth (Yellow)		
076607 05301 5	16" x 16"	20 / 20

Polishing Cloth (Yellow) is ideal for streak-free cleaning of mirrors, optical lens and high polished items.

tip

Micro-fiber is virtually scratch resistant but may pick up debris that can scratch. Clean micro-fiber products often for best results.

Wood Flooring Species

MEASUREMENT CRITERIA

The Janka hardness test is a measurement of the force necessary to embed a .444-inch steel ball to half its diameter in wood. It is the industry standard for gauging the ability of various species to tolerate denting and normal wear, as well as being a good indication of the effort required to either sand, nail, or saw the particular wood.
